

Dr. Keith Javery, D.O.; Dr. YiJia Chu, M.D.; Dr. Joshua Suderman, M.D.

WHEN SANDRA WALKED into the Javery Pain Institute office in Grand Rapids 13 years ago, she thought her life was over and the visit was going to be another failed attempt at ending her nightmare. The doctors at the Javery Pain Institute didn't save her life, but they did the next best thing — they made it possible for Sandra to live her life the way she wants to, without chronic pain preventing her from doing the things she loves to do.

Sandra's story is commonplace for Dr.

Keith Javery, Dr. YiJia Chu, Dr. Joshua Suderman, and the team at Javery Pain Institute. The doctors agree it all starts with "see-ing and hearing" from their patients.

They say information and communication are the first steps to a pain-free life, and the staff at JPI takes the time to listen and explore before developing an effective and individualized solution. During this process, not only do the doctors and their team begin understanding

and treating their patients, but they build a relationship with them.

Pain is something most people deal with at some point in their lives, and chronic pain — which lasts more than 30 days — is a disease that needs to be examined and treated right away. The mission at Javery Pain Institute is to eliminate or reduce the pain, in order to greatly improve the quality of life for those suffering from chronic pain.

The team at Javery Pain Institute treats a wide range of pain, from acute pain to chronic pain stemming from a variety of sources including disease, surgery, or unknown causes. They also provide advanced pain management in a practice that places a premium on compassionate care and respect for the individual.

The process includes eliminating their patients' discomfort, decreasing the frequency and intensity of intractable pain, increasing a patient's ability to function, and em-

powering them with a good understanding of their diagnosis and treatment. The team takes a patient-centered, multidisciplinary approach, crafting solutions that often combine advanced medical intervention with other promising therapies — physical, occupational, behavioral, and more — to create lasting, effective relief.
